INDEX TO VOL. XXXVIII.

A.

Acid, carbonic, apparatus for solidifying, Johnston's, 297.
Adams, Prof. C. B., new species of Delphinula, 193.
Shells obtained by dredging, and other new species, 396.
Agriculture, collection of statistics, 135.
Alger, Mr. F., exchanges of minerals, 380.
Allen, Z., letter to R. Hare on the Providence Tornado, 74.
Alligator, a huge one killed at Manilla, account of, 313.
American Association for Advancement of Science proposed, 179.
Philosophical Society's Proceedings, abstract of, 153.
Analysis of Chrome Iron, 243.
of Idocrase, 120.
of Iron Ore and Anthracites, 382.
of a meteoric mass from East Tennessee, by Troost, 250.
of serpentine marble from Vermont, by Jackson, 198.
of water from British Channel, 12.
Andromeda mariana, 196.
Anemometer, indications of, 103.
Antarctic Expedition, 204.
Arteries, new mode of repressing hemorrhage from, 133.
red appearance of their coats, 134.
Association, British, 10th meeting of, announced at Glasgow, 406.
Circular of to scientific men, 406.
Atmospheric distribution, inequalities in, 265.
Atoms of organic compounds, how related, 121.
Aurora Borealis of Sept. 3d, 260, 376.
and sunset at Rochester, 146, 147.

B.

Bache, Prof. A. D., on American Meteorology, 95.
on the rapid corrosion of a chain cable, 177.
Barium, strontium and calcium, how prepared, 115.
Barometer, new mode of filling, 109.
Basilosaurus of Harlan, geognostic position of, 381.
Beaumontite, a new mineral species described, 198.
Binney, report on birds, and fish, and reptiles of Massachusetts, 393.
Birds, habits of certain species, 392.
Blasting rocks by galvanic and electrical excitement, 33, 188.
Booth, J. C., analysis of chrome iron, 243.
Bonnycastle, Prof. C., on the depth of the sea as determined by echo, 161.
Boston Society of Natural History, abstract of their proceedings from June 5 to Sept. 4, 1839, 193; from Oct. 2 to Dec. 18, 1839, 391.
Botany and Zoology, section A, of British Association Proceedings, 128.
Boyé, Martin H., new compound of platinum, 186.
Brain, manual mode of examination, 133.
Brewer on eggs of Chicadee, 195.
on the habits of certain birds, 392.
Bridges, Ithiel Town's improvements in, 276.
Bridge across James River, 286.
Brinckerhoff, minerals and shells to N. Y. Lyceum Natural History, 198.
British Association, 9th meeting, abstract of proceedings, 93.
British Association for Advancement of Science, 10th meeting of announced, 406.
R. I. Murchison's letter to Prof. Silliman on, 406.
office bearers of, 10th meeting, 407.
Antarctic Expedition, 204.
Channel, water from analyzed, 12.
Burmah, earthquakes in, 385.

C.

Calcium obtained by Dr. Hare, 181, 189.
Calculus treated by lithotrity, 134.
Calorimeter, a new one by Dr. Ure, 109.
Calymene Bufo, inferior surface of, 410.
Canton, China, meteorological observations made at, 265, 301.
Capillary action, a new development of, 180.
Carburets, crystallization of, 118.
Carcharias obscurus, 195.

Carbonic acid condenser, 297.
removed from wells, 206.
Cataract, capsular, removal of, 133.
Catlin, Mr. G., his journey to Côteau des Prairies, 138.
Catoptric examination of the eye, 187.
Cavities in chalk filled with gravel, 122.
Chain cable, corrosion of, 176.
Charcoal burning, deadly effects of, 134.
Chemistry, binary theory of bodies, 115.
Law of substitutions, 114.
Chemistry and mineralogy, section B, British Association, 114.
Webster's Manual of reviewed, 329.
Chinese writing, 398.
Circular of Brit. Association, 10th meeting, 407.
Chromic iron ore analyzed, 243.
Classification of rocks, letter of R. I. Murchison on, 408.
Ciliograda of British seas, 129.
Combe, G., lectures on phrenology, 390.
Comet, a new one seen by Encke, 378.
tails, 35.
Conductors, electrical, effects of introducing substances between, 222.
Conrad, T. A., on Caradoc sandstone, 87.
Ludlow Rocks, 89.
observations on plastic clay, 91.
new species of Gnathodon, 92.
on Silurian system, 86, 89.
Wenlock shale and limestone, 88.
Cotta, Hr. Dr., on footmarks in sandstone, 255.
Cotton of commerce, cultivation of, 131.
Côteau des Prairies, Catlin's acc't of, 138.
Crania Americana reviewed, 341.
Crust of globe, minimum thickness of, 106.
Crystals, models of, in mica, 187.
Cuba, chromic iron of, analyzed, 243.
Current, electrical, induced on itself, 212.
of third, fourth, and fifth order, 226.
Currents, secondary, how produced, 215.
at a distance, 219.

D.

Delphinula, new species, 193.
Dewey, Prof. C., on aurora and sunsets, 146.
Dodder, common, 131.
Donation of books to American Philosophical Society, Philadelphia, 156.
Du Ponceau on Chinese writing, 400.
Dyke of trap in Cumberland, 127.

E.

Earthquakes, severe, in Burmah, 385.
Earth's temperature in deep mines, 108.
at different depths near Edinburgh, by Prof. Forbes, 108.
Earthen ware made of millstone grit, 127.
Eaton's Manual of Botany, 378.
Eclipse, solar, of May 14 and 15, 1836, 191.
of Sept. 18, 1838, 158, 163, 171, 174.
Ehrenberg, M., discoveries in fossil infusorial animalcules, 405.
Electricity, experimental researches in, by M. Faraday, 378.
Electricity and magnetism, contributions to, 170, 209.
ordinary, induced currents produced from, 232.
Electrical currents in metalliferous veins, 120.
Electro-dynamic induction, 209.
Elephant Shark, 197.
Elm tree moth, parasite on its eggs, 385.
Elvella esculenta, 194.
Emerson, G. B., on Lycopodon giganteum, 391.
Emys Blandingii, 195.
Encke's letter to Prof. Bache, 184.
Europe, geological map of, 126.
Exchanges of shells and insects, 205.
Exploring Expedition, U. S., progress of, 387.
Eye, catoptric examination of, 190.

F.

Faraday, M., a letter to him from Dr. Hare, 1.
Experimental researches in electricity, 378.
Feet of animals, impressions of, 127.
Fermentation, experiments on, 120.
Fish fossil of Agassiz, last No. on, 121.
from Manchester, Eng., 125.
how studied in confinement, 132.
reptiles, and birds of Mass., 379.
reports on, examined by Mr. Binney, 393.
fifteen species from Ohio named, 392.
two of Ray, 396.
Flora of England, additions to, 133.
fossil, of Great Britain, 127.
Forbes on mica for polarizing light, 101.
Formulæ relative to comets, 160.

G.

Galvanic battery used in blasting, 33.
Gems, practical remarks on, 61.
Geology and Geography in British Association report, 121.
Germany, rocks of, examined, 126.
Gibbs, J. W., on Gissi vocabulary, 41.
on the Vai or Vey vocabulary, 43.
on the Mendi vocabulary, 45.
Gnathodon, new species of, 93.
Gould, A. A., new species of Delphinula, 193.
on thirteen species of shells, 196.

Gould, A. A., on Californian shells, 396.
Graham, Prof., theory of voltaic circle, 117.
Gray, on several North American Orchidaceæ, 306.
Green, H., on vegetable organography, &c., 49.
Green, Prof. J., on inferior surface of Calymene Bufo, 410.
Griffith, Mrs. M., on halo or fringe, 22.
Grove, W. R., on small galvanic battery, 116.
Gutzlaff, Rev. C., letter on Chinese writing, to Mr. Du Ponceau, 398.
Gymnotus electricus dissected, 197.

H.

Hamilton, on Katakekaumene, 206.
Halo or fringe surrounding bodies, 22.
Hare, Dr. Robert, on barium, strontium, and calcium, 115.
on blasting rocks by galvanism, 188.
his compound blowpipe, 173.
on calcium, 181.
letter to Faraday, 1.
large mass of platinum melted, 155, 163.
notice of tornadoes, 73, 400.
decomposition and recomposition of water, 336.
Hayes, A. A., on the action of metallic tin on solutions of muriate of tin, 408.
on new minerals, 410.
Hays, Dr., on catoptric examination of the eye, 188.
Henry, Prof. J., contributions to electricity and magnetism, 170, 209, 404.
new capillary action, 180.
currents produced from ordinary electricity, 232.
lateral discharge of electricity, 154.
Herapath, J., Railway Magazine, &c. 205.
Herrick, E. C., aurora borealis, 260.
meteoric observations, November and December, 1839, 377.
parasite of elm tree moth, 385
shooting stars of Aug. 10 and 11, 1839, as seen in Canton, China, 301.
shooting stars of Aug. 9 and 10, 203.
Herschel on dissevered rays of light, 110.
Hildreth, S. P., Meteorological Journal, 273.
Hubbard, Prof. O. P., on removal of carbonic acid from wells, 206.
Human race, extinction of, 130.
Humbert, Jonas, Jr., compound electromagnet, 205.

I.

Ichthyosaurus at Strensham, Eng., 126.
Idocrase, composition of, 120.
Indigestion, alkaline, 134.
Induced currents of the third, fourth, and fifth order, 226.
from ordinary electricity, 232.
Induction, electro-dynamic, 209.
conditions which influence, 212.
of secondary currents, 215.
at a distance, 219.
Infusoria, analysis of M. Ehrenberg's discoveries, 405.
Iron, steel and malleable iron, how differing in composition, 121.
Ivory deprived of earthy matter, 134.

J.

Jackson, Dr. C. T., analysis of serpentine marble from Vermont, 198.
Jackson, Dr. C. T., analysis of new mineral, 198.
letter to him on the Côteau des Prairies, 138.
his oxy-alcohol lamp, 335.
Japanese and English vocabulary, 163.
Johnson, Prof., analysis of anthracite and iron ore, 382.
Johnston, Prof. J., carbonic acid solidifying apparatus, 297.
Jones, Wm. G., on a new compensating pendulum, 274.

K.

Katakekaumene described, 207.
Kirtland, Dr., description of fifteen new species of fish, 392.
Kupffer, A. T., observations météorologiques, 380.

L.

Lacaille's Cœlum Australe Stelliferum, reduction of stars in, 94.
Lamp of safety, by Baron Mesnil, 115.
of Dr. Jackson's, oxy-alcohol, 335.
Lardner on resistance of air to rail cars, 136.
Larned, Rev. Wm. A., translation of Dr. Cotta's article of footmarks, 255.
Lathrop, Prof., theory of the earth, 68.
Latitudes of various places, 168.
Lea, J., on new species of Melania, 175.
M. Carey, analysis of chromic iron, 243.
Lead, white, theory of formation of, 119.
Lee, A., M. D., letter to him on gems, 61.
Letter of Dr. Hare to Mr. Faraday, 1.
Letter of John Strang to Prof. Silliman on British Association, 406.
Lewenberg, Leon, his telescope, 379.
Lightning, effects of, on three of H. B. M. ships, 112.

Locke, Dr. John, on magnetic dip and intensity in Ohio, 157.
Longitude, determination of an arc between Armagh and Dublin, 113.
of City Hall, New York, 113.
of several places in Michigan, 154.
Loomis, Prof. E., on magnetic dip and intensity in Ohio, 397.

M.

Mackerel shark's intestine, 197.
Magnetic dip and intensity, mode of determination, 179.
in Ohio, 157.
Magnets, best positions of three for mutual action, 96.
Map, geological, of Cornwall and Devon, 124.
Mathematics and physics, section A, British Association, report 9th meeting, 94.
Matter not infinitely divisible, 113.
Mechanical science, section G, of British Association, report 9th meeting, 136.
Medical science, section E, British Association, report 9th meeting, 133.
Medium, resisting theory of, 246.
Melania Cincinnatiensis, 175.
Metallic tin, action of on solutions of muriate of tin, 408.
Metals, galvanization of, 119.
Meteoric mass, description and analysis of, 250.
observations in November and December, 1839, 377.
Meteors of November, 1838, as observed at Philadelphia, and elsewhere, 173, 176, 179.
Meteorology of elevated regions, 102.
American, report on, 95.
Meteorological hourly observations, 95.
observations made at equinoxes and solstices to be reduced, 95.
observations at Great Malvern, 102.
at Plymouth, Eng., 109.
phenomena at Ghats, W. I. 103.
Journal, kept at New York for 1838–9, 323.
at St. Johns, N. B., and Canton, China, 265.
at Marietta, Ohio, 273.
Mica used in polarizing light, 101.
Minerals and shells presented to N. Y. Lyceum Nat. History, by Dr. Brinckerhoff, 198, 201.
Minerals, new ones mentioned from S. America, 410.
Mitchell, Wm., on tails of comets, 37.
Mollusca, pulmoniferous, 131.
Morgan, K. G., on galvanism in blasting rocks, 33.
Morse, S. F. B., on the twilight bow, 389.
Morton, S. G., his Crania Americana reviewed, 341.
Murchison, R. I., letter to Prof. Silliman on British Association, 406.
letter to Prof. Silliman on classification of rocks, 408.
Murchison's Silurian system, 86.
on geological map of Europe, 126.
on a part of Germany, 126.

N.

Natural History Society of Boston, proceedings of, 391.
Newfoundland, meteorological observations at, 265.
Nomenclature of the stars revised, 94.
Nulty on formulæ for comets, 160.

O.

Observations of magnetic dip and intensity in Ohio, 397.
Observatory at Cape of Good Hope, 95.
at Girard College authorized, 398.
magnetic, their establishment recommended by British Association, 108.
Observatory, letter from Prof. Encke on, to Prof. Bache, 183.
Œrsted's memoirs on tornadoes, 82.
Orchis tribe, synonymy of several species, 306.
Osler, Mr. F., on indications of his anemometer, 103.

P.

Parasite of the eggs of Geometra vernata, 385.
Parker, P., meteoric observations at Canton, August, 1839, 301.
Paving with wood, 136.
Peat bogs, 127.
Peltier on tornadoes, 401.
Pendulum, new compensating, 274.
improved compound, by W. J. Frodsham, 107.
Perry, Thos. H., on a resisting medium, 246.
Philosophical (Amer.) Society, proceedings of, 153, 396.
Photogenic drawing, Talbot's remarks on Daguerre's process, 97.
Photometer, new, described by Dr. Daubeny, 97.
Pipe Stone quarry on Côteau des Prairies, 139.
Phrenology, lectures on, by G. Combe, 390.
Physick, Dr. P. S., notice of, 155.

Planorbis, new species, 193.
Platinum, new compound of, 186.
large quantity melted, 163, 155.
Polarized light, oxyhydrogen blowpipe used to exhibit, 102.
Polarizing light by mica, 101.
Powell, Prof., on interference of light, 107.
on refractive indices, 107.
on wave theory, 108.
Prayer in the Mendi language, 48.
Problems, dynamical, new mode of solving, 106.
Proceedings of Boston Society of Natural History, 396.
American Philosophical Society, 153, 396.

R.

Redfield, W. C., abstract of meteorological observations made at Canton and St. Johns, 265.
abstract of meteorological register kept at New York, 1838 and 1839, 323.
Refractive indices, 107.
Resistance of the air to railway trains, 136.
Resisting medium, probable effects of, 246.
Rocks, classification of, 408.
Rogers, Wm. B., Prof., on the tertiary of Virginia, 183.
Ruminants, follicular dentition in, 129.
Rutland county, Eng., statistics of, 135.

S.

Salts, haloid, existing in solution, 118.
Schweitzer, G., analysis of sea water, 12.
Sea, depth of, determined, 161.
Secular variations of the magnetic needle in connection with theory of the earth, 68.
Scirpus sylvaticus, 195.
Serpentine marble, analysis of, 198.
Shells and minerals presented to N. Y. Lyceum by Dr. Brinckerhoff, 198.
Silk, grown at Nottingham, Eng., 130.
Silurian system of America, 86.
Skulls of Aboriginal Americans, 341.
Small pox is on the increase, 134.
power of new virus, 134.
Spectrum, solar, new observations on, by Sir J. Herschel, 110.
Speculum of plate glass, 107.
Stars, nomenciature of, to be revised, 94.
reduction of those in the Cœlum Australe, 94.
reduction of those in the Histoire Celeste, 94.
extension of the Astronomical Society's Catalogue, 95.
Stars, shooting, of Aug. 9 and 10, 1839, 203.
seen at Canton, Aug. 10 and 11, 1839, 301.
Statistics of agriculture, 135.
criminal, of England and Wales, 135.
Steam, specific gravity of, at different temperatures, 137.
Steam Navigation Journal, 205.
Steam ship Savannah, her log book, 155.
Stevelly, on cloud, wind, and rain, 105.
on filling barometers, 109.
Stomach, existence of muriatic acid in during digestion, 119.
Storer, on Carcharias obscurus, 195.
Emys Blandingii, 195.
fishes and reptiles of Massachusetts, 379.
Squalus elephas, 197.
fifteen species of Ohio fishes, 392.
two species of Ray, described by, 396.
Strang, John, letter to Prof. Silliman, 407.
Syngnathus, taken near Boston, 195.
Synonymy of the Orchis tribe, 306.

T.

Taber, Thomas, practical remarks on gems, 61.
Tails of comets, 35.
Talbot, on Daguerre's photogenic process, 97.
Teeth of mammalia in Suffolk, England, described by Lyell, 124.
fossil, examined by Owen, 127.
microscopic structure of, 134.
Tertiary of Virginia, by Prof. Wm. B. Rogers, 183.
Teschemacher, J. E., on Elvella esculenta, 194.
minerals found at Milk row, 194.
plants from Blackstone river, 195.
Andromeda mariana, 196.
fossil coals and madrepores, 197.
Theory of the earth in connection with secular magnetic variations, 68.
Tin, metallic, action of on muriate of tin, 408.
Tornadoes, notices of, by R. Hare, 73.
Œrsted's memoir on, 82.
Tornado at Chatenay, near Paris, 77.
Providence, R. I., 74.
Town, Ithiel, his improvements in bridges, 276.
Tracks of animals in variegated sandstone, 255.
Troost, Prof. G., analysis of a meteoric mass, 250.

Tubular cavities in the chalk, 122.
Twilight bow, 389.
Twining, Prof. A C., on Aurora borealis of Sept. 3, 1839, 376.
Tyrian dye, 126.

V.

Vegetable organography and physiology, 49.
Vegetables, fossil, structure of, 126.
Virus, vaccine, liable to lose its virtue, 175.
Vocabulary of Gissi or Kissi language, 41.
Mendi language, 45.
Vai language, 43.
Voltaic battery of extraordinary power, 116.
circle, theory of, 117.

W.

Ward, C. J., exchanges of shells, 205.
Water of British Channel analyzed, 12.
decomposition and recomposition of, 336.
Waves, determination of their laws, 100.
Wax tablet used in instructing the blind, 186.
Webster, Prof. J. W., notice of his Manual of Chemistry, 329.
Weights, atomic, of elementary bodies, 119.
Whales, remains of, found at Durham, Eng., 130.
Wheat, its growth accelerated, 129.
Wilkes, Lt. C., account of exploring expedition, 387.
Woody tissue, formation of, 128.
Wool, new species of, introduced into Britain, 132.
Wyman, Dr. J., dissection of mackerel shark, 197.
electrical eel, 197.
abstract of proceedings of Boston Nat. Hist. Soc., 193, 391.

Z.

Zeuglodon, geognostic position of, 381.
Zoological researches in the Orkneys, 128.
